hp StorageWorks
Enterprise Virtual Array

Using 146GB Disk Drives

You can use the 146GB Fibre Channel disk drive with the following VCS versions:

■ Enterprise Virtual Array v2.0, VCS v2.006 (or later)

■ Enterprise Virtual Arrays v3.0, VCS v3.001 (or later)

If you use a 146GB disk drive with a VCS version that is earlier than the stated versions, your Enterprise Virtual Array can exhibit unpredictable results, including unstable array operation or data loss. If your array does not meet these version requirements, please contact your HP Authorized Service Representative for appropriate corrective measures.
